A: Just to provide an answer to the various general medical software questions: I've been using OpenClinica for many years in both my research and clinical settings. The thing I like most about it is that is easy to use and has the functionality I need (and many of my colleagues do too), and is free. It can even be run in the cloud to save on local server costs. You can also try the open-source R. Long-term results of squamous cell carcinoma of the tongue: a retrospective study of 102 cases. The aim of this study was to evaluate the results of a long-term follow-up of patients affected by squamous cell carcinoma of the tongue. Between 1973 and 1991, 102 patients were treated at the Department of Otorhinolaryngology, Head and Neck Surgery, University of Naples, because of histologically proved squamous cell carcinoma of the tongue. Surgical treatment was done in 44 cases (43.1%); there were 16 total (61.5%) and 12 partial (42.9%) glossectomies. Two of the latter had a free surgical margin (8.3%). Regional radiotherapy was performed in 13 cases (12.6%); in three of them this treatment was adjuvant (15.3%). In total radiotherapy, 8.8% of patients showed local recurrence (4.9% local recurrences, 4.9% regional recurrences), while only one (1.2%) had regional and distant metastases. Fifteen years overall and disease-free survival were respectively, of 84% and 71%. With respect to treated patients, age had no influence on
